### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in an interview with Joseph Chung on 2/14/06. This examiner amendment is being made to overcome the Mori et al (US5482471) reference, which shows a frame providing vertical force to the socket body.

The application has been amended as follows: **Revise the last two lines of claims 1, 9 and, 17 as shown below.**

**1. the frame is stationary during the entire operation of the lever and provides a downward force upon the protrusions so as not to allow the socket body to move upwardly.**

**9. the frame is stationary during the entire operation of the lever and is vertically engaged with the socket body so as to prevent upward movement of the socket body.**

**17. wherein the frame is stationary during the entire operation of the lever and catches the socket body so as to prevent the socket body from upward moving away from the printed circuit board.**

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 9 and 17 the prior art of record does not teach or suggest alone or in combination, the combination of elements especially, the stationary frame's downward force preventing the socket body from moving during the entire operation of the lever. This limitation will further prevent any damage during the mating of the electrical interfaces.

The examiner has listed four new references in the accompanying PTO-892. All teach that the lever and socket plate are not connected to the socket but to the frame. Alternatively, if you were to read the entire device in these references as the socket then there is no frame.

The Mori et al reference (US5482471) is still the best reference found by the examiner. Mori teaches lever and socket plates that are connected to the socket but no stationary frame during the entire operation of the lever.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled  
“Comments on Statement of Reasons for Allowance.”

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Zarroli whose telephone number is 571-272-2101. The examiner can normally be reached on 7:30 to 3:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, T.C. Patel can be reached on (571) 272-2800 ext 39. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
